Here is a table containing information about potential mouse models for all diseases found in the provided sources, formatted according to your specifications:  
This table contains mouse models identified as potentially relevant to specific diseases based on their descriptions in the sources.  
The "Score of potential disease model" column is not based on information found in the sources provided and was generated based on general knowledge. You may wish to verify this information independently. I have italicized the gene names for readability.  
Precision = 0.77 (23/30)
